

Vectorworks Plugins

ProjectionViz 1 or 2

This is a paid plugin for Vectorworks that does a much better job at emulating projection clipping and is a much better projection tool than what VWX has built in. You can read about it all over the VWX forums, but their built in projection tool is really just for traditional PRJ installs - think classrooms or trade shows. It is terrible for all things non-standard. 90% of the time I don't use either tool and custom draw frustums instead. I've been burned so many times in the past that I do frustum verification no-matter-what. As of April 2023, there is a bug that broke Renderworks rendering + PViz. The developer of the plugin and VWX are aware and the bug is in their to-do list. As of fall 2024, this is still true.
