

# LUTs

LUTs are “Look Up Table” color files that apply a “look” to footage, or provide a color conversion to footage. Camera manufacturers often provide LUTs to use on top of their “Log” (uncorrected) footage.

There's a lot more on LUTs that someone can add later.

## Adobe LUT Location

This is the path on a Mac computer for you to drop in your default preset LUTs for Premiere and After Effects. This is where you'd want to drop utility LUTs like FLogToWDR and then they'd show up in Lumetri color panels across both apps.

```
/Users/%user/Library/Application Support/Adobe/Common/LUTs/Creative/  
/Users/%user/Library/Application Support/Adobe/Common/LUTs/Technical/
```

To install for all users and for it to work properly in After Effects :  
Library/Application\ Support/Adobe/Common/LUTs/Technical/
